

Custom Fittings Made Simple

Exclusively made with

**On Point**  
ALIGNMENT TECHNOLOGY

## SIMPLISTIC APPROACH

The Maxim is fully customizable and intuitively designed to simplify scleral fittings. Standard sets include two diameter trial lenses with varying sagittal depths to accommodate the most challenging ocular surface abnormality. All Maxim trial lenses come with Limbal Curve Indicator (LCI) technology to ensure proper limbal clearance and made-to-order diameter changes resulting in perfected fittings.

## PRECISE POSITIONING

Practitioners can control corneal elevations in four independent zones to ensure the proper amount of corneal coverage for every eye condition.

## TECHNOLOGY INTEGRATION

- HD optics are available on all Maxim Lenses. A new proprietary High Definition algorithm is on the front surface of Maxim lenses offering truer more accurate vision and improvement to both high contrast and low contrast visual acuity. This front surface eccentricity reduces residual higher-order aberrations, especially spherical aberration and / or coma.
- Scleral topography mapping and integration with Eaglet ESP and Pentacam CSP
- OnPoint Alignment Technology for offset optics

*"Clinically, I know the Maxim® lens changes patients' lives. I am proud to be part of this new evolution in contact lens manufacturing. We are truly in the business of making life-changing products and with all our scleral lens designs, I know we do exactly that."*

William Masler, FCLSA  
Clinical Instructor, Contact Lens  
Education University of Colorado  
CEO, AccuLens

Maxim is the most valuable option for patients who have ocular surface disease such as Corneal Distortion, Keratoconus, Pellucid Marginal Degeneration, Corneal Transplants, Post Lasik Ectasia, Post RK, and Dry Eye Syndrome. When wearing a Maxim lens your patients will experience unsurpassed comfort and vision.

- **Free In-Office Training**
- **Trial Lens Sets Available**
- **6-Month Warranty**
